

FAQs

What makes True Broadband Networks digital service better?

Our network design allows us to completely bypass the analog local loop thus eliminating the need to convert analog signals to digital with a modem. This allows us to provide a more secure, faster connection to the Internet at a lower cost. Plus, because our service is true broadband, we offer upload speeds that are as fast as the download speeds.

DSL and Cable providers offer digital, broadband Internet service as well, don't they?

A true broadband internet connection must deliver symmetrical speeds, both upload and download. Neither DSL or Cable can do this, as they both convert analog signals from retrofitted networks designed for other purposes. The lack of a true, broadband signal impacts speed, security and cost for the Internet user.

What is upload speed and why is it important to me?

Upload speed is the rate at which emails and files are sent (uploaded) via the Internet. With the increasing popularity of video-conferencing, webinars and other communications tools that require larger files to be sent, upload speeds become crucial to uninterrupted "real time" Internet connections.

How does your service improve my data security?

Cable and DSL generated data (e-mails, attachments and content) travel freely over the Internet, before they find their proper destination. This increases delivery time and risks file corruption. Because we built an encrypted packet switch network, data is sent via data packets using destination-specific (point to point) routing, allowing messages to arrive faster and intact.

What allows True Broadband Networks to offer lower costs?

Because we have direct access to the Internet, we don't have to pay usage fees to any of the companies who own the cable and phone line networks. We pass this cost savings on to you, our customer!

How do I get started?

Give us a call to sign-up. We start with a site analysis scheduled at your convenience to determine the optimal network configuration for your location. We can then quote you the installation fee and schedule an installation date.

Built for the INTERNET

The true alternative to empower your world.

Introducing True Broadband Networks! Internet access that is **truly fast, truly secure** and provides a **true cost savings** to empower you and your business with reliable productivity.

True Broadband Networks (TBN) offers broadband Internet access, broadband phone service and broadband video applications to both businesses and residences in select parts of the Kansas City metropolitan area.

Broadband Service Type	Internet*		Phone**
	Pricing	Computers Served	Pricing
Residential	\$24.95	1	\$19.95 per line
Small Office/ Home Office	\$49.95	1-2	\$24.95 per line
Business Basic	\$79.95	3-5	
Business Gold	\$129.95	6-10	
Business Silver	\$179.95	11-15	
Business Platinum	\$299.95	16+	
	Upload and download from 10 Mbps and up		Includes unlimited local and domestic long distance, voicemail and popular calling features

Our Services are priced ala carte. Bundled pricing is available for combined internet, phone and video services. Please visit our website for details

* Price doesn't include installation charge.

** Additional installation charge of \$35 per line applies. Hardware costs additional.

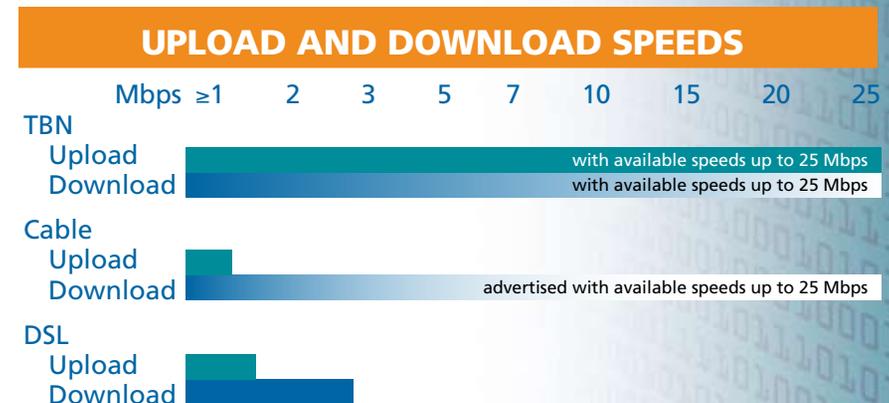

Unlike Cable and DSL companies who utilize analog networks built years ago for telephone and cable transmissions, True Broadband Networks was designed specifically to unleash the power of the Internet.

Our network was built to provide our customers performance and reliability that only a true digital, 4G, broadband network can deliver. Cable and DSL companies, on the other hand, still rely on modems to convert analog signals to digital.

Our network was built for the Internet.

TRUE BROADBAND NETWORKS PROVIDES:

- True productivity because our service is truly faster with upload and download speeds from 10 Mbps per second, double that of DSL and Cable for comparable plans.
- True security for all of your valuable internet transactions because only True Broadband Networks offers a true digital signal that never relies on an analog line transmission.
- A true cost savings to you. Because True Broadband Networks has direct access to the Internet, we don't have to pay usage fees to any of the companies who own cable and phone lines. And we don't charge you extra for additional bandwidth.
